

Domestic Abuse in Scotland, 2023-24

Official Statistics

Domestic abuse recorded by the police in Scotland, 2023-24

This bulletin presents statistics on domestic abuse, based on details of incidents and crimes recorded by Police Scotland in 2023-24. Domestic abuse recorded by the police does not reveal the incidence of all domestic abuse committed in Scotland, as not all incidents are reported to the police. These figures are used to inform policy and, in conjunction with findings on partner abuse from the Scottish Crime and Justice Survey (see [Chapter 3](#)), are used to assess the extent and nature of domestic abuse in Scotland.

The definition of domestic abuse used by Police Scotland¹ is:

‘Any form of physical, verbal, sexual, psychological or financial abuse which might amount to criminal conduct and which takes place within the context of a relationship. The relationship will be between partners (married, cohabiting, civil partnership or otherwise) or ex-partners. The abuse can be committed in the home or elsewhere including online’.

Key Points

The police recorded 63,867 incidents of domestic abuse in 2023-24, an increase of 3% compared to the previous year. This is the first year this figure has shown an increase since 2020-21.

In 2023-24, 38% of domestic abuse incidents recorded by the police in Scotland included the recording of at least one crime or offence.

The type of crime or offence that was most frequently recorded as part of a domestic abuse incident in 2023-24 was Common assault, accounting for 31% of all crimes and offences recorded. This was followed by Crimes against public justice and Threatening and abusive behaviour, each accounting for 20% of crimes and offences.

Crimes recorded under the Domestic Abuse (Scotland) Act 2018 accounted for 5% of crimes and offences recorded as part of a domestic abuse incident in 2023-24.

There were 116 incidents of domestic abuse recorded by the police in Scotland per 10,000 population in 2023-24. At a local authority level, Dundee City (183), West Dunbartonshire (153) and West Lothian (149) recorded the highest incident rates per 10,000 population.

Where gender information was recorded, just over four-in-five (81%) incidents of domestic abuse in 2023-24 involved a female victim and a male suspected perpetrator. This was the same as in 2021-22 and 2022-23.

¹ Police Scotland and the Crown Office and Procurator Fiscal Service (COPFS) have a shared definition of domestic abuse available on the [Police Scotland website](#).

Official Statistics

In 2023-24, 15% of domestic abuse incidents involved a male victim and a female suspected perpetrator (where gender information was recorded). This decreased slightly from 16% in 2022-23.

In 2023-24, the 31 to 35 years old age group had the highest incident rate for both victims (267 incidents recorded per 10,000 population) and suspected perpetrators (233 incidents recorded per 10,000 population).

Just under a third of incidents (31%) occurred at the weekend in 2023-24. This was a slight decrease from 32% in 2022-23.

In 2023-24, nine-in-ten (90%) of all domestic abuse incidents occurred in a home or dwelling.

DOMESTIC ABUSE RECORDED BY THE POLICE IN SCOTLAND, 2023-24

WHO were the victims?

In 2023-24, more than **4 out of 5** (83%) victims of domestic abuse were female, where known

63,867

incidents of domestic abuse were recorded by the police in 2023-24

WHAT was the gender of the victims & suspected perpetrators?

81% of incidents involved a female victim & a male suspected perpetrator

15% of incidents involved a male victim & a female suspected perpetrator

In the remaining **3%** of cases, victim & suspected perpetrators were the same gender

■ Incident rates per 10,000 population above the Scottish average

WHERE did the incidents occur?

90% of domestic abuse incidents occurred in a home or dwelling (where location was known)

WHEN did the incidents occur?

31% of domestic abuse incidents occurred at the weekend.

Official Statistics

Introduction

This statistical bulletin provides information on **domestic abuse incidents recorded by the police in 2023-24** (from 1 April 2023 to 31 March 2024).

The definition of domestic abuse used by Police Scotland is²:

‘Any form of physical, verbal, sexual, psychological or financial abuse which might amount to criminal conduct and which takes place within the context of a relationship. The relationship will be between partners (married, cohabiting, civil partnership or otherwise) or ex-partners. The abuse can be committed in the home or elsewhere including online’.

Police Scotland is responsible for operational policing in Scotland and is held to account by the Scottish Police Authority. [The Police and Fire Reform \(Scotland\) Act 2012](#) changed the policing landscape in Scotland, replacing the previous eight police forces, the Scottish Police Services Authority and the Scottish Crime and Drug Enforcement Agency from 1 April 2013.

The creation of Police Scotland altered the way in which domestic abuse data was collected. Prior to 1 April 2013, each legacy force had a bespoke system to collect the data required. Between 1 April 2013 and 31 March 2014 a new system – iVPD (interim Vulnerable Persons Database) was rolled out to the then 14 police divisions in Scotland. From 1 April 2014 onwards, all domestic abuse data has been collected through the iVPD.

Due to the changes in data collection, figures throughout the bulletin are presented with clear breaks in the time series between 2013-14 and 2014-15. As such, some caution should be exercised in interpreting the statistics on the number of incidents recorded across years.

The data in this bulletin covers the 13 police divisions in Scotland (across all 32 local authorities). Aberdeen City and Aberdeenshire & Moray police divisions merged together to form the North East police division in January 2016.

Information on crimes and offences³ recorded as part of a domestic abuse incident has been split into the eight crime and offence groupings used by the [Recorded Crime Accredited Official Statistics](#). Further breakdowns of crime and offence groupings are also shown where relevant.

² Police Scotland and the Crown Office and Procurator Fiscal Service (COPFS) have a shared definition of domestic abuse available on the [Police Scotland website](#).

³ [Section 5.3](#) in Annex 1 provides definitions of ‘crime’ and ‘offence’.

Official Statistics

This annual 'Domestic abuse recorded by the police in Scotland' Official Statistics bulletin forms part of a series of bulletins on the criminal justice system, which can be found on the [Scottish Government website](#).

All tables referred to below are available in the '[Supporting Documents](#)' [Excel workbook](#) for this bulletin. The workbook includes an 'Introduction' sheet, with information on how to navigate the tables, alongside a 'Notes' sheet, with relevant details to assist users when reading and interpreting results.

What are these statistics used for?

These statistics inform the Scottish Government's [Vision for Justice in Scotland](#). This was published in February 2022 and sets out a transformative vision for the whole justice system in Scotland. The 2022 strategy outlines how the Scottish Government will transform the justice system, through recovering from the impacts of the COVID-19 pandemic and beyond.

These statistics are also used by a range of stakeholders to monitor trends, for policy research and development, and for social research purposes. Further information on users and uses of the statistics is available in [Section 4.2](#) of this bulletin.

How does the Domestic Abuse (Scotland) Act 2018 impact these statistics?

This bulletin covers the fifth year of operation for the [Domestic Abuse \(Scotland\) Act 2018](#). The Act, which came into force on 1 April 2019, created a new offence for circumstances where a person engages in a course of behaviour⁴ which is abusive towards their partner or ex-partner.

The Act did not alter the way in which statistics on the volume of domestic abuse incidents reported to the police are collected and produced. As such its impact on this data is likely to be limited, albeit the associated awareness campaign to raise public understanding of domestic abuse, and to encourage victims to seek support may have had a role in the increased number of incidents seen during the years following the introduction of the act. [Police Recorded Crime Accredited Official Statistics](#) remain the primary source for users interested in the number of crimes recorded under the Domestic Abuse (Scotland) Act 2018.

The Act had some impact on statistics showing the volume and type of crimes and offences recorded as part of a domestic abuse incident. Prior to the 1 April

⁴ A course of behaviour involves behaviour on at least two occasions.

Official Statistics

2019, any criminal act which formed part of a domestic abuse incident (for example a common assault) was included within the statistics under the relevant crime or offence. From the 1 April 2019, where there is evidence that an incident forms part of a course of behaviour, new crimes of Domestic Abuse (Scotland) Act 2018 will also be recorded (split into whether they had a male or female victim).

In general, existing common law and statutory offences will continue to be recorded where appropriate, in addition to the new crimes. There are some exceptions, including the crimes and offences of Threatening and abusive behaviour and Stalking. These should no longer be recorded when occurring as part of a course of behaviour for domestic abuse, with the new crime of Domestic Abuse (Scotland) Act 2018 taking precedence.

The number of Threatening and abusive behaviour offences recorded as part of a domestic abuse incident have decreased since 2018-19, from 8,577 in 2018-19 to 6,369 in 2023-24. Over the same time the number of Stalking crimes (which sit within the Other crimes of non-sexual violence category) fell from 922 to 509. However, the change in Threatening and abusive behaviour offences may in part reflect the continuation of a longer-term trend, and in general it is difficult to quantify the extent to which the new offence has affected the recording of these cases. This will likely depend on the types of abusive behaviour that occur during a course of behaviour where the new offence may apply, some of which (such as psychological abuse) may not have included the recording of a crime or offence prior to the Act being passed.

Furthermore, in a limited number of cases when the incident occurred before 1 April 2019, offences that can now amount to a crime under the Domestic Abuse (Scotland) Act 2018 (e.g. Threatening and abusive behaviour and Stalking) could not yet be considered as part of the Act and would have to be recorded separately. As time progresses since the introduction of the Domestic Abuse (Scotland) Act 2018, these instances are likely to reduce.

Given this, some caution should be exercised when interpreting the statistics on the number of Threatening and abusive behaviour and Stalking crimes recorded before and after 1 April 2019 – due to the changes in the legislative and operational landscape used by police to record these crimes.

This caution should also apply to the data presented on the percentage of domestic abuse incidents that include the recording of at least one crime or offence, albeit this remained relatively stable in the year following passage of the Act. Where relevant, further information on these changes is provided throughout this bulletin.

Official Statistics

What impact did the COVID-19 pandemic have?

The statistics in this bulletin cover incidents of domestic abuse which were recorded between 1 April 2023 and 31 March 2024. The nationwide lockdowns and other measures put in place to limit social contact during the pandemic would have impacted domestic abuse largely in 2020-21, with 2021-22 also likely to be affected, albeit to a lesser extent. The final legal restrictions were lifted in April 2022, suggesting a much more limited impact in 2022-23.

When reviewing the data in this bulletin for the period that covered the pandemic, some caution is advised before necessarily attributing all changes to COVID-19. Whilst levels of recorded domestic abuse grew in 2020-21, they had also increased over the four preceding years, when the pandemic wasn't a factor.

An Official Statistics Publication for Scotland

These statistics are official statistics. Official statistics are statistics that are produced by crown bodies, those acting on behalf of crown bodies, or those specified in statutory orders, as defined in the [Statistics and Registration Service Act 2007](#).

Scottish Government statistics are regulated by the Office for Statistics Regulation (OSR). OSR sets the standards of trustworthiness, quality and value in the [Code of Practice for Statistics](#) that all producers of official statistics should adhere to.

Official Statistics

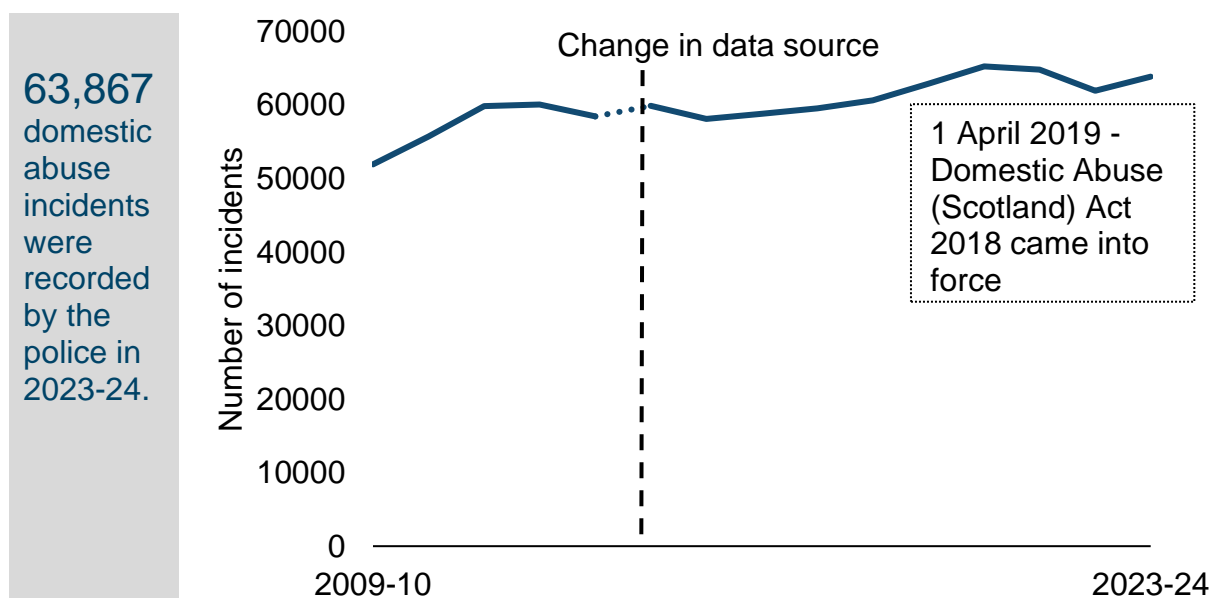

Incidents of Domestic abuse

The police recorded 63,867 incidents of domestic abuse in 2023-24, an increase of 3% compared to the previous year ([Figure 1](#) & Table 1). This is the first year this figure has shown an increase since 2020-21.

Of the 63,867 incidents of domestic abuse recorded by the police in 2023-24, 38% (24,144) included the recording of at least one crime or offence⁵. This is a lower proportion than in previous years (Table 1). The remaining 62% (39,723) did not include the recording of a crime or offence. [Section 2.3](#) provides information on incidents which do not include a crime or offence.

The number of domestic abuse incidents have increased since 2022-23 but remain lower than the peak in 2020-21.

Figure 1: Incidents of domestic abuse recorded by the police, 2009-10 to 2023-24

Note: See [Annex 2](#) for information on the change in data source between 2013-14 and 2014-15.

Incidents which included a crime or offence

For those domestic abuse incidents that included the recording of at least one crime or offence in 2023-24, the most frequently recorded was Common assault, accounting for 31% of all crimes and offences. This was followed by Crimes against public justice and Threatening and abusive behaviour, which each accounted for 20% of all crimes and offences ([Figure 2](#) & Table 2).

⁵ [Section 5.3](#) in Annex 1 provides definitions of 'crime' and 'offence'.

Official Statistics

Common assault accounted for around one-third of all crimes and offences for incidents of domestic abuse that involved a crime or offence.

Figure 2: Most frequently recorded crimes and offences as part of domestic abuse incidents, 2023-24

Note: An incident can have multiple crimes associated with it.

The Domestic Abuse (Scotland) Act 2018 was enacted on the 1 April 2019. Crimes recorded under the Act accounted for 5% of crimes and offences recorded as part of a domestic abuse incident in 2023-24. This is similar to the proportion of crimes and offences in 2022-23 (also at 5%) but slightly higher than in previous years (at 4%). These amounted to 1,552 crimes recorded under the Act in 2023-24.

[Section 1.2](#) on statistical impact provides further information on how crimes and offences might have changed due to the introduction of the Domestic Abuse (Scotland) Act 2018. Table 16 in the ['Supporting Documents' Excel workbook](#) provides details on the characteristics of these incidents.

Incidents which did not include a crime or offence

In 2023-24, 62% of domestic abuse incidents within the interim Vulnerable Persons Database (iVPD) did not include the recording of at least one crime or offence. This reflects the definition of domestic abuse used by Police Scotland, which is not restricted to behaviour where criminal conduct has been identified and recorded.

The iVPD itself is not a crime recording system. Instead, it aims to collate disparate pieces of information about incidents into a single file, allowing officers to build a narrative about people who have reported or been involved in an incident with a domestic abuse element.

A previous review of a sample of non-criminal domestic abuse incidents found that around half of these were based on some form of argument between partners or ex-

Official Statistics

partners, which did not have any reference to a physical confrontation or threatening behaviour. Around one-in-five were based on concern about the communication or attempted communication of one partner or ex-partner towards the other (excluding any reference to an argument or a specific crime or offence). The other cases covered a diverse range of situations. Further information on this review is provided in [Section 5.7](#).

Incidents of domestic abuse by local authority

The number of police recorded domestic abuse incidents varied at the local authority level. Between 2022-23 and 2023-24, around a fifth (7) of local authorities recorded a decrease in domestic abuse incidents, two local authorities saw very little (less than 1%) change and almost three-quarters (23) recorded an increase (Table 3).

In 2023-24, the highest percentages of domestic abuse incidents that also included the recording of at least one crime or offence were in Moray (51%), Argyll and Bute (48%) and West Dunbartonshire (45%). Whilst the lowest were in East Dunbartonshire (31%), Highland (32%) and Angus (32%) ([Figure 3](#) & Table 4).

Official Statistics

Moray saw the highest percentage of domestic abuse incidents involving a crime or offence.

Figure 3: Percentage of domestic abuse incidents recorded by the police which included at least one crime or offence being recorded, by local authority, 2023-24

Official Statistics

Incidents of domestic abuse per 10,000 population

Taking the [population of Scotland](#) as at mid-year 2023, there were 116 incidents of domestic abuse recorded by the police in Scotland per 10,000 population in 2023-24. At a local authority level, Dundee City (183), West Dunbartonshire (153) and West Lothian (149) recorded the highest incident rates per 10,000 population. Shetland Islands (46) and Na h-Eileanan Siar (47) recorded the lowest rates per 10,000 population ([Figure 4](#) & Table 5).

Official Statistics

Dundee has the largest number of domestic abuse incidents recorded by the police per 10,000 population with Shetland Islands having the lowest rate.

Figure 4: Incidents of domestic abuse recorded by the police per 10,000 population, by local authority, 2023-24

Note: Population estimates are at mid-year 2023 published by the [National Records of Scotland](#).

Official Statistics

Characteristics of victim & suspected perpetrator (where known)

GENDER

81% of incidents

perpetrator

In the remaining 3% of cases, victim & suspected perpetrator were the same gender

RELATIONSHIP

Half of incidents were between
ex-partners

AGE

31-35
year olds

highest rate per 10,000
population for both
victims & suspected
perpetrators

Note: Current partner is defined here as spouse/civil partner, partner and co-habitee. Ex-partner is defined as ex-spouse/civil partner and ex-partner.

Gender of victim & suspected perpetrator

Where the victim's gender was known, the clear majority of victims in 2023-24 (83%) were female. Over four-in-five incidents (81%) of domestic abuse in 2023-24 had a female victim and a male suspected perpetrator. This remained the same as in 2021-22 and 2022-23.

Again, where the victim's gender was known, 17% of victims in 2023-24 were male. In 2023-24, 15% of domestic abuse incidents involved a male victim and a female suspected perpetrator. This decreased slightly from 16% in 2022-23.

In the remaining 3% of domestic abuse incidents, the victim and suspected perpetrator were the same gender. This figure has remained relatively stable over several years ([Figure 5](#) & Table 6).

Official Statistics

Around 4 in 5 incidents of domestic abuse, where gender was known, had a female victim and male suspected perpetrator.

Figure 5: Gender of victim & suspected perpetrator¹, where known, 2014-15 to 2023-24

¹ The figure only displays incidents where gender of victim and suspected perpetrator is known. See [Annex 2](#) for more details on missing data.

Note: See [Annex 2](#) for information on the change in data source between 2013-14 and 2014-15.

Relationship between victim & suspected perpetrator

In 2023-24 half (50%) of domestic abuse incidents, where the relationship⁶ between the victim and suspected perpetrator was known, were between ex-partners. Just under half (49%) of incidents were between current partners. For the remaining 1% of incidents, the relationship was categorised as 'Other' (Table 7).

It should be noted that the proportion of incidents where the relationship between the victim and suspected perpetrator was unknown had increased in recent years (peaking at 18% in 2021-22) before dropping to 15% in 2022-23 and has now increased to a new peak of 21% in 2023-24. This is due to changes in recording practice in Police Scotland, for which further information is available in [Section 5.7](#).

⁶ Current partner is defined here as spouse/civil partner, partner and co-habitee. Ex-partner is defined as ex-spouse/civil partner and ex-partner.

Official Statistics

Age of victim & suspected perpetrator

In 2023-24, the 31 to 35 year old age group had the highest rate per 10,000 population for victims (267 incidents recorded per 10,000 population) (Table 8).

Female victims aged 31 to 35 had the highest rate (441) of domestic abuse incidents recorded by the police per 10,000 population. 31 to 35 was also the age group with the highest rate of domestic abuse incidents recorded per 10,000 population for male victims (84) ([Figure 7](#) & Table 8).

In 2023-24, the 31 to 35 years old age group had the highest incident rate per 10,000 population for suspected perpetrators (233 incidents recorded per 10,000 population) (Table 9). This was the same for both male suspected perpetrators (399 incidents recorded per 10,000 population) and female suspected perpetrators (74 incidents recorded per 10,000 population) ([Figure 6](#) & Table 9).

Females aged 31-35 had the highest rate per 10,000 population for victims, whereas males aged 31-35 had the highest rate for suspected perpetrators, where gender and age were known.

Figure 6: Gender and age of victim & suspected perpetrator¹, where known, 2023-24

¹ The figure only displays incidents where gender of victim and suspected perpetrator is known. See [Annex 2](#) for more details on missing data.

Note: Population estimates are at mid-year 2023 published by the [National Records of Scotland](#).

Victim & suspected perpetrator repeat analysis

The iVPD enables the identification of a victim or suspected perpetrator that has previously been entered into the system for domestic abuse. A victim or suspected perpetrator can appear multiple times in the database in any one year, each classified as a separate incident.

As the iVPD was introduced and rolled out across the then 14 police divisions during 2013-14, the first and any subsequent reference to any victim or suspected perpetrator in the repeat categories below only refers to whether they were involved

Official Statistics

in an incident of domestic abuse from 2013-14 (part year depending on divisional roll out⁷) and not in any years prior to the introduction of the iVPD.

In 2023-24 there were 44,565 domestic abuse incidents with sufficient information recorded⁸ to allow repeat analysis (70% of all incidents). The remaining 19,302 incidents (or 30%) did not include sufficient information to confirm one way or the other whether at least one of either the victim or suspected perpetrator had previously been recorded in an incident of domestic abuse.

For those incidents that did include sufficient information, 65% (or 28,952) had a victim and suspected perpetrator who had previously been recorded in an incident of domestic abuse – though these previously recorded incidents may have involved different partners/ex-partners. In a further 20% (8,802) of incidents, neither the victim nor the suspected perpetrator were found in the iVPD. In 15% (6,811) of incidents there was a mix of results for the victim and suspected perpetrator (i.e. only one of the victim or suspected perpetrator had previously been recorded) ([Figure 7](#) & Table 10).

Around two-thirds of domestic abuse incidents in 2023-24 involved a victim and suspected perpetrator who had previously been recorded in a domestic abuse incident.

Figure 7: Incidents of domestic abuse recorded by the police, by repeat victim/suspected perpetrator analysis, where known, 2023-24

⁷ Each police division rolled out the iVPD at different times throughout 2013-14.

⁸ Proportion calculated excluding incidents where information on previous history on iVPD is fully or partially not recorded.

Official Statistics

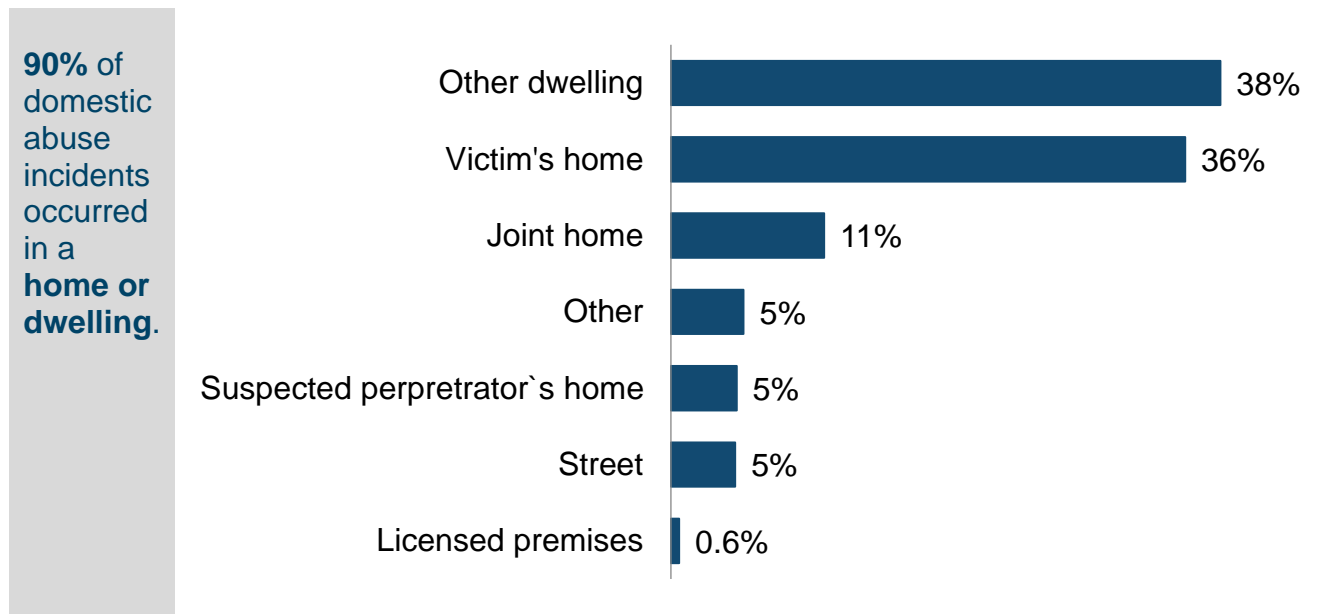

Location of incidents

In 2023-24, nine-in-ten (90%) domestic abuse incidents occurred in a home or dwelling. This is similar to 2022-23 (also 90%). This figure can be split into 36% of incidents that occurred within the victim's own home, 11% that occurred within a joint home and 5% that occurred in the suspected perpetrator's home. Over a third (38%) of incidents occurred in an 'other dwelling'. See [Section 5.7](#) for further detail.

The remaining 10% of incidents occurred in the street (5%), licensed premises (0.6%) or an 'Other' location (5%) ([Figure 8](#) & Table 11).

Around 9 out of 10 incidents occurred in a home or dwelling, where location was known.

Figure 8: Incidents of domestic abuse recorded by the police, by location, where known, 2023-24

Official Statistics

Day/month of occurrence

The following section is based on the date the incident of domestic abuse occurred, rather than when it was recorded by the police⁹.

Just under a third (31%) of incidents in 2023-24 ([Figure 9](#) & Table 14) occurred at the weekend, a slight decrease compared to the proportion in 2022-23 (32%). The remaining 69% of incidents are spread fairly evenly from Monday to Friday.

When looking at the month that incidents of domestic abuse recorded by the police occurred in 2023-24 (Table 15), no clear pattern emerges from the data, with incidents fairly evenly spread out across the year.

Tables for incidents by month are available within the ['Supporting Documents' Excel workbook](#) on the Domestic Abuse Statistics website.

Almost one third of domestic abuse incidents occurred over the weekend in 2023-24.

Figure 9: Incidents of domestic abuse recorded by the police, by the day of the week the incident occurred, 2023-24

⁹ See [Section 5.5](#) in Annex 2 for more information on the process of logging incidents.

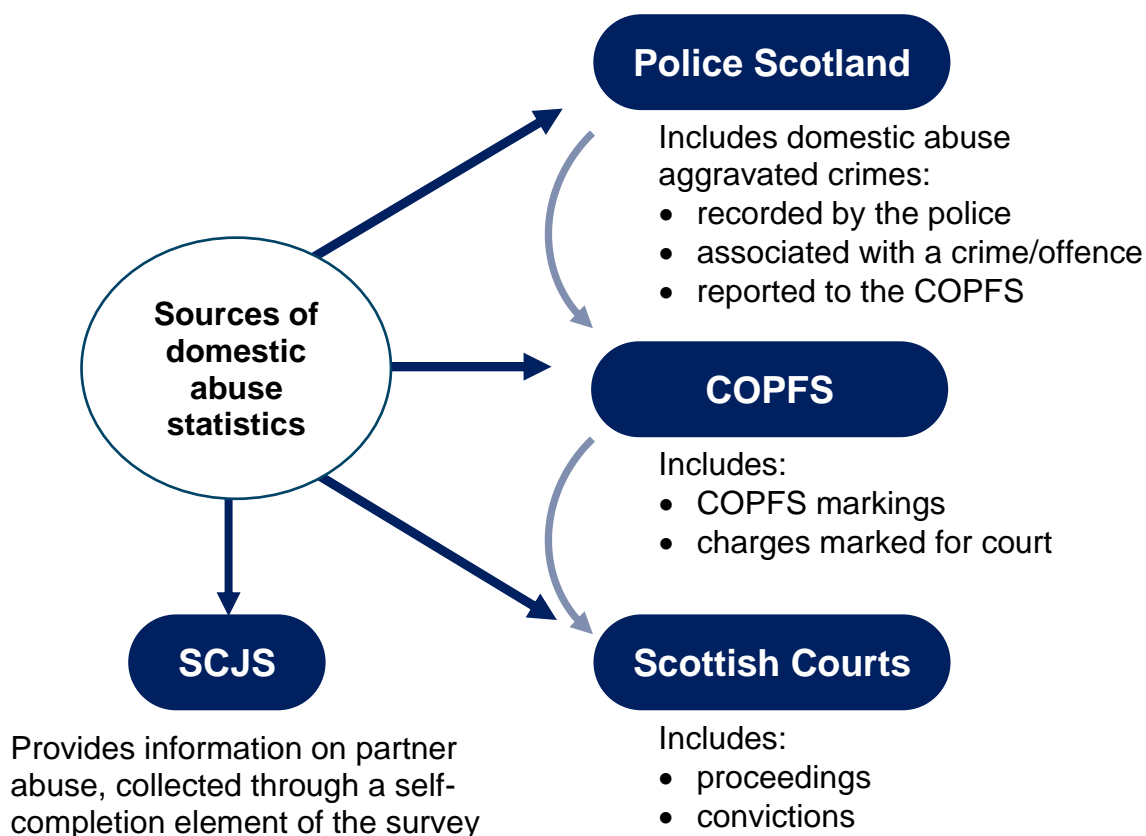

Official Statistics

Domestic abuse in context

There are a number of data sources which collect information on domestic abuse in Scotland. These include:

- **Police Scotland**, who report the number of domestic abuse aggravated crimes recorded (presented in this publication as Official Statistics, and as Administrative Data in their [Quarterly Management Information reports](#))
- **The Scottish Government Scottish Crime and Justice Survey (SCJS)**, which provides information on partner abuse
- **The Crown Office & Procurator Fiscal Service (COPFS)**, who have information on Procurator Fiscal markings and how many charges are reported to courts
- **The Scottish Government Criminal Proceedings in Scotland statistics**, which provides information on proceedings and convictions which take place in the Scottish courts

The relationship between these sources is summarised in the following diagram.

Official Statistics

Police Scotland Quarterly Management Information reports: Background

Police Scotland publish management information on the number of domestic abuse aggravated crimes recorded by the police.

The Quarterly Management Information reports make clear to users that the data they contain on domestic abuse aggravated crimes is based on the Administrative Data available to Police Scotland at that time and is not presented as Official Statistics. The annual Official Statistics on domestic abuse published within this bulletin are based on management information which has undergone further [quality assurance work](#), including additional dialogue with Police Scotland, in line with the [Code of Practice for Official Statistics](#).

The Quarterly Management Information reports are available from the 'How we are performing' section of [Police Scotland website](#).

These reports are produced to demonstrate Police Scotland's commitment to transparency (alongside other regular reporting activity to the Scottish Police Authority). The information within these reports is presented on a cumulative quarterly basis, with the first quarter of a reporting year containing three months of data (from April to June), the second containing six months of data (from April to September) etc. The reports are typically published within two months of the period to which they refer. From April 2024 (Q1 2024-25) data presented by Police Scotland is on Domestic Abuse aggravated crimes rather than domestic abuse incidents. This information is taken from a different source and is not comparable with previous quarters.

Scottish Crime and Justice Survey: Background

The [Scottish Crime and Justice Survey](#) (SCJS) is large-scale social survey run by the Scottish Government, which asks people about their experiences and perceptions of crime. The survey is based on a representative sample of adults (aged 16 and over), living in private households in Scotland.

The SCJS also provides results on the prevalence and nature of partner abuse. This data is collected through a self-completion module of the survey¹⁰. The most recent results on partner abuse were published in March 2021, including findings on partner abuse for the period 2018/20 (results for 2018-19 and 2019-20 have been combined to carry out the analysis). These results are described in the [2019/20 Main Findings Report](#).

It should be noted that whilst the SCJS uses a definition of partner abuse consistent with that adopted by Police Scotland in recording domestic abuse incidents, there are

¹⁰ The SCJS is completed face-to-face in the homes of respondents, with sections on more sensitive topics, including questions on partner abuse, completed by the respondent themselves using the interviewer's laptop or tablet.

Official Statistics

several differences that affect the comparability of the data. These include the fact that:

- most incidents of domestic abuse go unreported to the police. The 2018/20 SCJS found that just under a sixth (16%) of those who experienced partner abuse in the 12 months prior to interview said that the police came to know about the most recent (or only) incident. The SCJS also found that when asked the reasons for not reporting the most recent (or only) incident of partner abuse to the police, the most common reasons given were that those involved dealt with the incident themselves (36%), that the abuse was too trivial/not worth reporting (31%), or that the abuse was a private, personal or family matter (30%). This is a consistent finding with previous years
- the SCJS is a sample of those aged 16 and over living in private households. As such, adults living in other circumstances (for example tourists and those staying in institutions or communal residences, such as prisons or hospitals, military bases and student accommodation) or those aged under 16 are not included in the SCJS estimates
- the SCJS captures the victim's self-reported experience of partner abuse. Although this part of the survey is completed in private, some respondents may choose not to disclose information on particular incidents

The SCJS found that between 2008/09 and 2018/20 the proportion of respondents who had a partner, or contact with an ex-partner, in the 12 months prior to interview who experienced any partner abuse decreased from 4.2% to 3.2%. There has been no statistically significant change between 2016/18¹¹ and 2018/20 in the proportion of respondents experiencing any partner abuse in the 12 months prior to interview. A higher proportion of women than men experienced partner abuse in the 12 months prior to interview, at 3.7% and 2.6% respectively.

More detailed information, along with explanatory notes, is available on the SCJS website.

Crown Office and Procurator Fiscal Service: Background

The Crown Office and Procurator Fiscal Service (COPFS) publish management information on the number of charges reported to COPFS with a domestic abuse aggravator recorded against them. These figures also include the number taken forward to court, dealt with by direct measures (such as a fine), or where no action was taken.

[COPFS' Domestic Abuse and Stalking Charges 2023-24 Statistics](#) on the number of charges reported to them showed that the percentage of charges for stalking with a

¹¹ SCJS results for 2016-17 and 2017-18 have been combined to carry out the analysis.

Official Statistics

domestic abuse identifier fell from 72% in 2018-19 to 65% in 2019-20 and 56% in 2020-21. The percentage rose slightly to 57% in 2021-22 before falling to 53% in 2022-23 and 2023-24.

More detailed information, along with explanatory notes, is available in the statistics section of the [COPFS' Domestic Abuse and Stalking Charges 2023-24 Statistics](#).

Criminal Proceedings in Scotland statistics: Background

Statistics on proceedings and convictions concluded in Scottish courts are published in [Criminal Proceedings in Scotland](#). These statistics are derived from data held on the Criminal History System (CHS). This is a central database used for recording information on suspected perpetrators and those convicted of committing a crime. The publication presents the number of convictions under the Domestic Abuse (Scotland) Act 2018, convictions for crimes with statutory aggravations for domestic abuse, and convictions for crimes where a domestic abuse identifier was applied. Aggravations need to be proved in court and are taken into account during sentencing, which may result in a higher penalty being given.

The most recent available data are from [Criminal Proceedings in Scotland: 2021-2022](#). Data from 2020-21 and 2021-22 were affected by the COVID-19 pandemic and subsequent court closures, reduced court capacities and delayed cases where key participants tested positive for COVID-19. Volumes for these years should be treated with caution and not considered indicative of longer-term trends. Figures for 2019-20 are shared below, alongside both 2020-21 and 2021-22 figures, to provide context from the most recent pre-pandemic year.

In 2019-20 there were 212 convictions under the Domestic Abuse (Scotland) Act 2018, with a further 381 convictions in 2020-21, and 689 in 2021-22. This was out of 252, 418 and 810 people proceeded against, respectively, giving conviction rates of 84%, 91% and 85%. Although this crime came into effect at the start of 2019-20, the full course of conduct had to have taken place on or after 1 April 2019. Therefore, there will have been a time lag before such crimes could be reported, hence 2019-20 does not effectively cover a full year under the Act. The majority of people (62% in 2019-20, 56% in 2020-21 and 61% in 2021-22) convicted under this Act received a community sentence. Around one-fifth to one-sixth (18% in 2019-20, 19% in 2020-21 and 16% in 2021-22) received a custodial sentence with an average sentence length of around a year to a year and four months (363 days in 2019-20, 438 days in 2020-21, 482 days in 2021-22). This was the only crime type to show an increase in the number of proceedings in 2020-21, when the COVID-19 pandemic and subsequent court closures impacted heavily on the capacity for cases to be heard in court and continued to increase substantially in 2021-22.

A statutory aggravation for domestic abuse involving a child can be applied to crimes under the Domestic Abuse (Scotland) Act 2018. There were 39 convictions for this aggravation in 2019-20, 89 in 2020-21 and 139 in 2021-22. As stated above, as the Act came into effect for a course of conduct committed on or after 1 April 2019 the 2019-20 data does not effectively cover a full year.

Official Statistics

The [Abusive Behaviour and Sexual Harm \(Scotland\) Act 2016](#) created a statutory aggravation of domestic abuse which came into force in April 2017. This can be applied to any relevant crime or offence (for example to Common assault). Where this aggravation was proven against the main charge 8,174 people were convicted in 2019-20, with 6,529 in 2020-21 and 7,803 in 2021-22. The main charge is the one receiving the most severe penalty.

The CHS also includes some codes that are not statutory but are used as identifiers to highlight particular cases to the police, COPFS, or Scottish Courts and Tribunals Service. This includes an identifier for domestic abuse, which identifies domestic abuse related charges for operational purposes, whether or not the statutory domestic abuse aggravation applies to them. There were 9,420 convictions where a domestic abuse identifier was recorded against the main charge in 2019-20, 7,591 convictions in 2020-21 and 9,576 in 2021-22. The 2021-22 figure was the highest since 2017-18 (9,885).

Note that the introduction of the new domestic abuse crime under the Domestic Abuse (Scotland) Act 2018 in 2019-20 may have affected the number of convictions with a domestic abuse identifier or statutory aggravation. This crime covers a course of conduct. Before the introduction of the crime this may have resulted in multiple convictions for different offences at different times, each with the statutory aggravation and/or identifier applied, whereas now they may result in a single conviction (with a more severe penalty).

Official Statistics

Future developments

Review of administrative data source

We previously informed users of work to assess the suitability of different sources of data within Police Scotland on domestic abuse-related activity, to determine what the optimal source of information may be going forward for the production of these statistics.

As part of ongoing discussions with Police Scotland, we have chosen to continue using the iVPD as the source of these statistics for 2023-24. However, due to IT improvements within Police Scotland, from April 2024 domestic abuse aggravated crimes will now be recorded on the crime management system, rather than the iVPD. We will continue our work with Police Scotland to review the impact this will have on the statistics and their comparability and will inform users of any updates in this area, including any impact this may have on the next bulletin (for 2024-25).

We will also keep under review the completeness of the information we receive from the iVPD. As outlined in [Section 2.7](#), the proportion of incidents where an 'Unknown' relationship has been recorded within the iVPD had been gradually increasing since 2016-17 reaching a peak of 21% in 2023-24. Similarly the proportion of location classed as other dwelling has been increasing.

Users can register for updates on the above work through the ScotStat network.

Users of these statistics

These statistics are used by a range of stakeholders within central government, the police and other public bodies for a variety of purposes.

Domestic abuse statistics are also used by a variety of external stakeholders, including victim support groups, national and local journalism, academics and students and school pupils writing dissertations and carrying out projects.

Official statistics are a tool used in decision making both inside and outside government, and for this tool to be effective it has to be designed to meet the needs of users. We always welcome feedback on the content and the uses made of our statistical bulletins and users are invited to submit their comments and any suggestions for improvement to: Justice_Analysts@gov.scot.

Official Statistics

Annexes

Annex 1: Terminology and context

Domestic abuse

A statistical collection on domestic abuse (previously referred to as domestic violence) was introduced in 1999. The definition of domestic abuse used by Police Scotland and the Crown Office and Procurator Fiscal Service (COPFS)¹² is:

‘Any form of physical, verbal, sexual, psychological or financial abuse which might amount to criminal conduct, and which takes place within the context of a relationship. The relationship will be between partners (married, cohabiting, civil partnership or otherwise) or ex-partners. The abuse can be committed in the home or elsewhere including online’.

Suspected perpetrator

The term suspected perpetrator is used to encompass both a person suspected to have committed an offence where the police attend an incident and a person charged by the police with having committed a criminal offence.

Recording crimes and offences

Contraventions of Scottish criminal law are divided for statistical purposes only into crimes and offences. The term “crime” is generally used for the more serious criminal acts; the less serious are termed “offences”. The distinction is made only for statistical reporting purposes and does not influence the way the police investigate reports of criminal activity. The seriousness of the offence is generally related to the maximum sentence that can be imposed, and does not relate to the impact on the individual experiencing the incident.

In one criminal incident, several crimes or offences may occur – e.g. a suspected perpetrator may assault their spouse and damage their car in the process. In this example, crimes of vandalism and assault would be recorded. Statistics in this bulletin either relate to the number of incidents recorded or the number of incidents with at least one crime or offence committed.

Crime groupings

The detailed classification of crimes and offences used by the Scottish Government to collect criminal statistics contains over 500 codes. Further information on how the crime codes are grouped can be found in the [Recorded Crime User Guide](#). A new crime and offence grouping structure has been used since 2021-22, for more

¹² Police Scotland and the Crown Office and Procurator Fiscal Service (COPFS) have a shared definition of domestic abuse available on the [Police Scotland website](#).

Official Statistics

detailed information on these changes please see [Annex 5 of the 2021-22 Recorded Crime publication](#).

Calculating rates per 10,000 population

Figures on incidents of domestic abuse in this publication are presented both as number of incidents and as rates per 10,000 population. These rates are calculated using the mid-year population estimates from the National Records of Scotland. [Mid-2023 population estimates](#) are used in this bulletin.

Official Statistics

Annex 2: Data sources and quality

The creation of Police Scotland has altered the way in which domestic abuse data has been collected. Prior to 1 April 2013, each legacy police force had a bespoke system to collect the data required. Between 1 April 2013 and 31 March 2014, the interim Vulnerable Persons Database (iVPD) system was rolled out to the then 14 police divisions in Scotland. From 1 April 2014 onwards, all domestic abuse data was collected through the iVPD.

To reflect these changes in data collection, tables and figures in this bulletin are presented with clear breaks in the time series between 2013-14 and 2014-15. The break is denoted by a dashed line and labelled to highlight the change to the data source. Caution should be exercised when making comparisons over time and when interpreting variation in the number of incidents recorded across years.

The data in this bulletin covers the current 13 police divisions in Scotland (across all 32 local authorities). Aberdeen City and Aberdeenshire & Moray police divisions merged together to form the North East police division in January 2016.

The data presented in this bulletin is a snapshot of domestic abuse incidents recorded on the iVPD at the end of the financial year.

Process of logging an incident

When a victim and/or witness makes initial contact with the police regarding a domestic abuse incident, Police Scotland log the incident in their System for Tasking and Operational Resource Management (STORM), Police Scotland's national command and control system¹³.

STORM is largely used for resource allocation purposes. Depending on the information supplied and the outcome of additional enquiries, the incident may result in the creation of one or more crime reports on the relevant crime management system (CMS).

Once the police have assessed the incident, they determine if a vulnerable person record is to be set up in iVPD. The purpose of the iVPD is to collect information on people who are deemed to be in a vulnerable situation, to ensure that any concerns for the victim (or any other person subject of concern) are assessed and appropriate actions are taken.

Incidents in this bulletin are counted against the year in which they are recorded by Police Scotland on the iVPD system¹⁴. Not all incidents are reported to the police immediately following their occurrence. As such each year's figures on incidents of domestic abuse will include a proportion of incidents committed in earlier years.

¹³ STORM has been used across Scotland since February 2018.

¹⁴ [Annex 2](#) provides information on Police Scotland's incident recording systems.

Official Statistics

It is important to recognise that amendments to crime and offence records may occur following submission of figures by Police Scotland to the Scottish Government. This may be due to the reclassification of crimes into different crime groups or, no crime being established after further investigation by police into the originally reported offence.

Additional information on the trend data

In addition to this, as seen in [Section 2.7](#) there has been an increase since 2016-17 in the proportion of incidents where the relationship between the victim and suspected perpetrator is unknown. Further to this, the proportion of cases where no information was recorded on the characteristics of the victim and/or the suspected perpetrator has also been increasing (from 4,522 or 8% in 2016-17 to 19,642 or 31% by 2023-24).

Police Scotland have advised that a procedural change was made immediately prior to 2017-18 whereby for certain non-criminal incidents of domestic abuse (i.e. where both parties were believed to have an equal involvement), details were no longer recorded for a specific victim or a specific suspected perpetrator. Prior to this, two incidents may have been recorded treating one party as the victim and the other as the suspected perpetrator and the second for the reverse position. Whilst this change may also have had an effect on the number of domestic abuse incidents recorded by the police, the impact of this cannot be quantified.

There has also been a gradual increase in the number and proportion of incidents where the specific relationship (i.e. Spouse/Civil Partner, Co-habitee, Partner etc.) of those involved was unknown (to 11,557 or 18% in 2021-22), before reducing slightly to 9,487 or 15% in 2022-23 but increasing again to 13,594 or 21% in 2023-24. There can always be some occasions where no information can be provided on the specific relationship, for example where a domestic abuse victim is identified, but the perpetrator's identity remains unknown.

In other cases (and similar to the above) where no criminal behaviour can be evidenced, it is possible none of the individuals involved will be recorded as a perpetrator. In such instances a 'Not known' or 'Relationship not recorded' value may be selected. There may remain some variation across Scotland in the approach to recording these specific variables, with Police Scotland recently re-issuing guidance to Officers. This in turn may have led to the increase highlighted above in the proportion of incidents where detailed information on the specific relationship between those involved was not recorded.

Incidents that have taken place in an 'other dwelling' have also gradually increased year-on-year in the last ten years and now account for the highest percentage of locations of domestic abuse incidents. This is likely due to the increase in incidents where (as described above) the relationship is unknown and therefore if victim and suspected perpetrator are not identified it is not possible to identify whether it is victim or suspected perpetrator's home if they do not share a common place of residence. Another possibility is where incidents have taken place inside a home that neither of them are residing at.

Official Statistics

Further information on incidents without a crime or offence recorded

In 2016-17, Scottish Government statisticians reviewed a sample of domestic abuse incidents which did not include the recording of any crime or offence, to provide users with additional information on their circumstances. Four hundred incidents from 2016-17 were randomly selected from the iVPD and a synopsis of each case was recorded. The findings, presented below, should be treated as a broad indication of the characteristics of these incidents. They are not an exact measure, given the associated possibility of sampling error and wide range of behaviours covered.

Around half of these incidents (52%) were based on some form of argument between partners or ex-partners that excluded any reference to a physical confrontation or threatening behaviour. Of these cases, around two-thirds include one of the partners/ex-partners contacting the police, whilst in around 30% of cases a third party or other witness did so. A quarter of cases that refer to some form of argument include one party contacting the police as they wanted the other person to leave.

Around a fifth of these incidents (19%) were based on concern about the communication or attempted communication of one partner/ex-partner towards the other (excluding any reference to an argument or a specific crime or offence). In almost all these cases it was one of the partners/ex-partners that contacted the police. This involved a range of different incidents, including frequent references to unwanted communication or attempted communication, which could be through electronic means (text messages, phone call) or in person. This category also includes incidents where one party was concerned about what their partner/ex-partner has said about them (sometimes to third parties).

Beyond the above, the other cases covered a diverse range of situations. Some included police being contacted for advice or individuals raising concerns without reference to any specific incident (7% of sample). In others the police were contacted by one partner/ex-partner out of concern for the wellbeing of the other party (3%) or by someone wishing to retrieve belongings from a partner/ex-partner (3%).

Finally, some incidents recorded in the iVPD in 2016-17 were best described as situations in which it is inferred that a crime or offence may have taken place (13% of the sample). In most of these cases (11% of the sample) further investigation determined either that a crime or offence had not occurred (for example by the police reviewing the content of text messages that were alleged to be threatening) or there was insufficient evidence for the police to record a crime or offence. In the other cases (2% of the sample), further discussion with Police Scotland determined that these incidents did include a crime or offence. This splits into cases where a crime or offence had been recorded in crime management systems¹⁵ but not added to the iVPD or where no crime or offence had been recorded at all.

¹⁵ Incidents may result in the creation of one or more crime reports on the relevant crime management system. Different crime management systems are used Police Scotland to record and manage crime.

Official Statistics

Annex 3: Auditing of data by His Majesty's Inspectorate of Constabulary in Scotland (HMICS)

HMICS Crime Audit 2020

[HMICS Crime Audit 2020](#) aimed to assess the state, efficiency and effectiveness of crime recording by Police Scotland and the extent to which recording practice complies with the Scottish Crime Recording Standard (SCRS) and Counting Rules. The SCRS requires that all incidents, whether crime-related or not, will result in the creation of an auditable record. HMICS tested the accuracy of crime recording by auditing incident and crime records in five categories, including sexual crime, violence, domestic abuse, non-crime related incidents, and no-crimes. The section below provides information and outcomes on the audit of domestic abuse incidents.

Police Scotland's recording system STORM has been audited to assess the compliance for domestic abuse incidents. HMICS examined 3,150 incidents relating to domestic abuse, 1,001 of which resulted in a crime record. HMICS found that the compliance was good overall, as:

- 94.6% of domestic abuse incidents examined were closed correctly
- 92.6% of domestic abuse crime records were counted and classified correctly
- 95.2% of domestic abuse crimes were recorded within 72 hours of the incident being reported to the police, with 10 of the 13 divisions achieving over 95% compliance

Whilst the HMICS Crime Audit 2020 did not extend to data on domestic abuse included on the iVPD, it highlights the quality of domestic abuse information provided by STORM.

Since the HMICS Crime Audit 2020, HMICS have undertaken a follow-up inspection relating to Domestic Abuse and published the results of the [HMICS Thematic Inspection of Domestic Abuse Phase 1](#) in January 2023.

Annex 4: Validation

Reporting of incidents and quality assurance of domestic abuse statistics

The statistics reported in this bulletin do not reveal the incidence of all domestic abuse committed, since not all incidents are reported to the police. However, in conjunction with the [Scottish Crime and Justice Survey](#) (SCJS), these statistics help to assess the extent and impact of domestic abuse in Scotland. There are a number of reasons for domestic abuse being under reported, including victims experiencing

Official Statistics

fear and shame as a result of the incident. Under reporting may also be caused by a perpetrator physically preventing a victim reporting the domestic abuse. Challenging domestic abuse is a high priority for both Police Scotland and COPFS. As such, they have a Joint Protocol outlining the procedures and practices to follow when dealing with incidents of domestic abuse. The protocol is available on [Police Scotland website](#).

The data presented in this publication is drawn from an administrative system. Although care is taken when processing, quality assuring and analysing the data, administrative data is subject to the inaccuracies inherent in any large scale recording system.

This data goes through a process of quality assurance in which figures are checked against previous years and comparable sources. Anything unusual or which requires further explanation is then fed back to Police Scotland for their attention. Any amendments are carried out and the final data is used to produce a set of data tables which can be used to check the final dataset.

During the quality assurance checking process, it is possible for errors to be found in data for previous years. While we do not routinely revise figures, we are committed to correcting errors in the data and providing suitable explanations for any changes made to previously published data, in line with the [Scottish Government's guidance on Producing Official Statistics](#).

Whilst Police Scotland aims to record complete information for all incidents, there is some challenge in retrieving and linking the captured information to meet the full data requirements for this publication. As a result some values for certain variables are marked 'missing'.

The statistics provided in the data return for this publication prior to 2014-15 have highlighted the different ways in which legacy police forces recorded information. In particular, police practice in deciding when the behaviour justifies the recording of a crime or offence may differ. For example, some legacy forces had ruled that no crime or offence should be recorded if no further action was taken e.g. because the victim did not wish any action to be taken. Other forces may have recorded this as a crime or offence.

With all police divisions now using the same iVPD system to record incidents of domestic abuse and following the same Police Scotland guidance, inconsistencies in approach may minimise over time. [Annex 2](#) provides more information on how the incidents are logged in Police Scotland's systems.

Historical changes in methodology

2009-10 was the first year in which data was submitted based on the date the incident was recorded. Prior to this, data was returned based on the number of incidents which occurred during that time period. As historic data has never been revised in this publication series, any incidents which occurred in a different time period to the date in which the incident was recorded will have been excluded from the returns.

Official Statistics

For example, if an incident occurred during 2007-08 but was recorded during 2008-09, it would have been excluded from 2008-09 (since the date committed is not in the relevant time period), but it would also have been missed out of the 2007-08 data as the submitted data would not have been updated. Hence, the incident would not be reported in the statistics in this publication series and therefore contributed to an underestimate. Although this publication series has never revised this information, some legacy forces may have updated their own collections and prepared refreshed data in response to bespoke requests.

The number of incidents in the bulletins from 2009-10 onwards is based on the date the incident was recorded. This should give a better reflection of police activity relating to incidents of domestic abuse. By reporting on the date the incidents were committed, we get a snapshot account of the number of domestic abuse incidents occurring within a particular period. However, by analysing the data based on the date recorded, we can see the trend in reporting incidents of domestic abuse to the police. Hence, if there was an increase in the number of victims who report incidents of domestic abuse to the police sometime after they occurred, this should be reflected in the statistics.

Annex 5: Legislation

The [Domestic Abuse \(Scotland\) Act 2018](#) came into force on 1 April 2019 and created a new offence for circumstances where a person engages in a course of behaviour¹⁶ which is abusive towards their partner or ex-partner. Prior to the 1 April 2019, any criminal act which formed part of a domestic abuse incident (such as a Common assault or Threatening or abusive behaviour) was included within the statistics under the relevant crime or offence. Where there is evidence of a course of behaviour, new crime codes of Domestic abuse (Scotland) Act 2018 (against a male or female victim) have been created. In general, existing common law and statutory offences will continue to be recorded where appropriate, in addition to the new crimes.

As well as common law, some of the main legislation applicable to domestic abuse is as follows:

- [Family Law \(Scotland\) Act 2006](#) (Section 31 of this Act introduced the concept of “domestic interdicts” into the 1981 Act, which applies to unmarried cohabitants (either opposite-sex or same-sex). Domestic interdicts have much the same effect in relation to cohabitants as matrimonial interdicts have for married couples as is defined in section 10 of this Act, which amends section 14 of the 1981 Act to extend the scope of matrimonial interdicts to include not only a matrimonial home, but also any other home owned by the applicant, the applicant’s place of work and the school attended by any child in the applicant’s care)

¹⁶ A course of behaviour involves behaviour on at least two occasions.

Official Statistics

- [Protection from Abuse \(Scotland\) Act 2001](#)
- [Crime and Disorder Act 1998](#)
- [Protection from Harassment Act 1997](#)
- [Family Law Act 1996](#)
- [Matrimonial Homes \(Family Protection\) \(Scotland\) Act 1981](#)

Annex 6: Comparisons with rest of the UK

England & Wales

Domestic violence and abuse data in England & Wales is not comparable with Scotland's statistics on domestic abuse due to differences in definition. The [UK Government's definition](#) of domestic violence and abuse is:

'Any incident or pattern of incidents of controlling, coercive, threatening behaviour, violence or abuse between those aged 16 or over who are, or have been, intimate partners or family members regardless of gender or sexuality. The abuse can encompass, but is not limited to psychological, physical, sexual, financial, emotional'. The definition used by Police Scotland does not include family members, with the data collected only including domestic abuse between partners (married, cohabiting, civil partnership or otherwise) or ex-partners. The definition used by Police Scotland also has no age restrictions upon it. Differences in legislation and common law also have to be taken into account when comparing the crime statistics for England & Wales and Scotland.

It should be noted that the Domestic Abuse Bill passed both Houses of UK Parliament and was signed into law on 29 April 2021. This is set to provide further protections to people experiencing domestic abuse, as well as strengthen measures to tackle perpetrators. More information on the Domestic Abuse Act is available on the [Home Office website](#).

Domestic abuse statistics for England & Wales from the Crime Survey for England & Wales, police recorded crime and a number of different organisations are available on the [Office for National Statistics website](#).

Northern Ireland

Similarly to the comparability issues with England & Wales, statistics on domestic violence and abuse in Northern Ireland are not directly comparable to those in Scotland. The [Police Service of Northern Ireland's definition](#) of domestic abuse is outlined in the Northern Ireland Government Strategy '[Stopping Domestic and Sexual Violence and Abuse in Northern Ireland](#)' as:

'Threatening, controlling, coercive behaviour, violence or abuse (psychological,

Official Statistics

virtual, physical, verbal, sexual, financial or emotional) inflicted on anyone (irrespective of age, ethnicity, religion, gender, gender identity, sexual orientation or any form of disability) by a current or former partner or family member’.

The definition clarifies that:

- ‘incident’ means an incident anywhere and not confined to the home of one of the partners/family members
- ‘family members’ include mother, father, son, daughter, brother, sister, grandparents, whether directly or indirectly related, in-laws or stepfamily
- ‘intimate partners’ means there must have been a relationship with a degree of continuity and stability. The relationship must also have had (or reasonably supposed to have had) a sexual aspect, such as in the relationship between husband and wife or between others generally recognised as a couple including same sex couples.

The main difference between the definitions is that the one used by Police Scotland does not include family members, with the data collected only including domestic abuse between partners (married, cohabiting, civil partnership or otherwise) or ex-partners. Domestic abuse statistics for Northern Ireland are available on the [Police Service of Northern Ireland website](#).
